

Custom Tanks

Developed from its long experience of design and manufacture of transportable tanks for the offshore oil and gas industry, Suretank's range of specialist and static tanks encompasses a range of tanks from 500L to 120,000L for service on the platform, service vessel or FPSO, as well as a range of static vessels for shore-base use.

Compliance with international Rules for Ships' requirements under Lloyds and DNV, NORSOK, ASME U Stamp, PED and other international construction codes, has allowed Suretank to build these units to suit the strictest requirements.

Suretank will build either to its own design or, if available to the client's own design and always meets the client's individual quality and design requirements.

Methanol Tank

Vacuum Tank
